Hello!

WordPress has a built-in feature that detects when a plugin or theme causes a crash on your website and notifies you with this automated email.

In this case, WordPress detected an error with your plugin: Neuron Builder.

First, visit their website (<https://deborafreitas.art/>) and check if there are any visible problems. Then visit the page where the error was found (<https://deborafreitas.art/wp-admin/post.php?post=1233&action=elementor>) and check if there are any visible problems.

Please contact the support team where you host your site for help investigating this issue.

If your site appears to be broken and you can't access your control panel as usual, WordPress now has a special "restore mode." This allows you to securely access your dashboard and investigate further.

To keep your site secure, this link will expire in 1 day. Don't worry about this, however, a new link will be emailed to you if the error occurs again after the link has expired.

When seeking help with this issue, you may be asked to provide some of the following information:

WordPress version 6.4.3
Current theme: Floona Child Child (version 1.0.0)
Current plugin: Neuron Builder (version 1.0.8.1)
PHP version 8.1.27
